Sathish Kumar V

AI Engineer · Building systems that ship, not just demo

Chennai, India · Open to UK/US Remote

IN SHORT

I lead a team of AI engineers at a consulting firm. We build systems that help enterprises make sense of their documents, data, and decisions. My work has saved clients thousands of hours of manual work. The contract extraction project I led reduced processing time from 260 hours to 26 minutes — and turned a 4-week proof of concept into a 6-month engagement because it actually worked.

I'm looking for a remote role with a UK or US company where I can build AI that ships to production, not just presentations.

EXPERIENCE

AI Team Lead

Oct 2025 – Present

Consulting Firm · Chennai

> **Enterprise AI Platform**
> Built private ChatGPT alternative for 200+ users. Connected to SharePoint, Power BI, CRM. Solved the "consultants using public AI with client data" compliance problem.

> **Sales Impact**
> Won 5+ opportunities through solution architecture and pre-sales. If clients ask "how would this work?", I'm usually the one answering.

> **Team Leadership**
> Managing 6-7 engineers across multiple projects. Own technical direction and AI Playbook (internal knowledge base for production AI patterns).

AI Engineer → Product Lead

Apr 2024 – Oct 2025

Same Firm

> **Contract Extraction (my best work)**
> Client spent 260 hours extracting data from 200-page contracts. Built pipeline with PaddleOCR + Qwen 7B. Chose small model over GPT-4 because it was accurate enough and 15x cheaper. Result: 26 minutes, 85% automation. 4-week PoC became 6-month engagement.

> **PE Firm Context Layer**
> AI architecture for investment workflows using Claude Enterprise and MCP. "Devil's Advocate" feature that challenges assumptions became their favorite part.

Data Engineer

Apr 2023 – Apr 2024

Same Firm

Built data foundations for AI: medallion architecture (5M+ daily records), dbt models, SCD Type 2, data quality monitoring. Learned that AI without clean data is just expensive guessing.

Software Engineer

Feb 2022 – Apr 2023

Same Firm

APIs (Node.js, FastAPI), ETL pipelines (1M+ records/day), Docker deployments (60% faster releases).

Full Stack Developer

2017 – 2022

Various Companies · Chennai

C#, .NET, SQL Server. Enterprise systems for retail and services. Learned that code exists to solve business problems, not to be clever.

PROJECTS THAT SHOW HOW I THINK

Contract Intelligence Platform

Problem: 260 hours manual extraction. **What I tried:** GPT-4 Vision (too expensive), commercial OCR (failed on nested tables). **What worked:** PaddleOCR + Qwen 7B + human review for low-confidence fields. **Result:** 26 min, 85% automation, 15x cheaper than GPT-4. **What broke:** Multi-currency tables caused hallucinations — fixed with explicit currency detection.

Enterprise AI Platform

Problem: Consultants using ChatGPT with client data. **Solution:** Private AI with SharePoint, Power BI, CRM integration. **Impact:** Compliance risk eliminated, knowledge searchable, new hires productive faster.

SKILLS

Languages:	Python (daily), TypeScript (often), SQL (constantly), C# (past life)
AI/ML:	LangChain, LangGraph, RAG, PaddleOCR, Azure AI, AWS Bedrock, Claude, OpenAI
Data:	dbt, PostgreSQL, Redshift, Azure Data Factory, Power BI
Infrastructure:	Docker, Azure, AWS, Terraform, GitHub Actions

EDUCATION

MCA · University of Madras · 2017-2020

BCA · Jairam Arts and Science College · 2014-2017

Availability: Immediate · **Work preference:** Remote, UK/US timezone overlap · **Published:** "Contract Intelligence at Scale" on Medium
